Chapter 1

Phase 2A Research: Commerce (Wholesale & Retail)

Sector: Commercio (ingrosso e dettaglio) — ATECO codes G45–G47 **Date:** 2026-02-28

Role: Sector Research Specialist (raw findings, no analysis)

1.1 1. How SMEs in Commerce Operate Day-to-Day

1.1.1 1.1 Sector Profile

Commerce (wholesale & retail) represents **22–24% of all enterprises** in Veneto, making it the largest sector by enterprise count (~92,000–100,000 businesses regionally). The market tertiary sector in Veneto (commerce, tourism, services combined) accounts for **126,513 business headquarters** and **51,227 dependent local units** as of end-2024 ([Confcommercio Veneto / Unioncamere Veneto, 2025](#)).

Italian wholesalers (grossisti) are predominantly **small and medium-sized, family-run companies**, with annual revenues ranging from EUR 3–20 million (72% of businesses) to EUR 40 million (28%) ([Confcommercio — Giornata Nazionale del Grossista](#)).

1.1.2 1.2 Typical Daily Operations — Wholesale (Ingrosso)

Early mornings: Approximately 49% of wholesale markets operate from 2–3 AM, though preferences are shifting — 29% favor earlier opening and 37% prefer daytime operations ([Confcommercio](#)).

Core daily tasks ([Confcommercio](#); [Danea.it](#); [Gi Group](#)): - **Goods receipt and dispatch** (carichi e scarichi): Receiving shipments from suppliers, verifying quantities against purchase orders, storing goods - **Inventory management:** Checking stock levels, tracking product locations, monitoring expiry dates (especially food) - **Order processing:** Receiving orders from retail clients

(phone, email, fax, increasingly online), picking and packing - **Delivery coordination:** Preparing transport documents (DDT — Documento di Trasporto), coordinating with delivery drivers - **Invoicing and accounting:** Issuing invoices via SDI (electronic invoicing), reconciling payments, managing accounts receivable/payable - **Client relationship management:** Managing relationships with retailers, restaurants (HoReCa), street vendors, and other wholesalers - **Supplier negotiations:** Price negotiation, order placement, quality control

Client base of wholesalers: Retailers (28%), other wholesalers (23%), street vendors (17%), with growing relationships with HoReCa and large-scale retail (GDO). Key value-added services: selection and storage (#1), cold storage (#2), direct customer delivery (#3) ([Confcommercio](#)).

1.1.3 1.3 Typical Daily Operations — Retail (Dettaglio)

Core daily tasks ([iKyber](#); [Shopify Italia](#); [FourWayShop](#)): - **Store operations:** Opening/closing, visual merchandising, customer service - **Point-of-sale management:** Processing sales, returns, cash handling, receipt issuance - **Inventory control:** Counting stock, reordering, managing seasonal changes - **Supplier ordering:** Selecting products, placing purchase orders, receiving deliveries - **Pricing and promotions:** Setting/updating prices, managing discounts and promotions - **Customer communications:** Responding to inquiries (phone, email, social media, WhatsApp) - **Administrative tasks:** Bookkeeping, electronic invoicing, tax compliance, employee scheduling

1.1.4 1.4 What Remains Manual / Paper / Spreadsheet-Based

Inventory management with Excel is widespread and problematic ([Danea.it](#); [Mecalux.it](#); [iKyber](#)): - Excel spreadsheets are not real-time, requiring continuous manual updates - High error probability during manual data entry, with consequent time lost in verification - Data stored on local hard drives, creating risk of loss from theft, accidents, or virus infection - No integration with e-commerce platforms, POS systems, or analytics tools - Excel described as making inventory “a nightmare” (un incubo) for small retailers

Other manual processes commonly reported: - Order taking via phone, fax, WhatsApp, or email — then manually entered into systems - Paper-based delivery documents (DDT) still common alongside electronic versions - Customer relationship tracking in notebooks or basic spreadsheets - Price list management via printed catalogs or manually updated PDFs - Stock counting by physical walk-through rather than automated scanning

1.1.5 1.5 Software Tools in Use

Most common tools ([Osservatorio Innovazione Digitale nelle PMI](#), Politecnico di Milano): - **Accounting/administration software** — most widespread category among SMEs - **Basic**

network protection — second most common - **Cloud services and B2B e-commerce platforms** — growing, especially among mid-sized firms - **Data analytics for business decisions** — present but marginally structured

One-third of SMEs lack dedicated IT management, either internal or external ([Osservatorio PMI](#)).

E-invoicing (fatturazione elettronica): Mandatory in Italy since 2019 via the SDI (Sistema di Interscambio) platform. Despite mandatory adoption, 32% of SMEs report no benefit on the passive cycle, and 43% perceive no benefit on the active cycle. 18% report it worsened administrative workload ([Osservatori.net](#); [Confcommercio](#)).

1.2 2. Business Association Reports & Surveys

1.2.1 2.1 Confcommercio Veneto — “Il Terziario di Mercato in Veneto” (2025)

Key findings from the latest report ([Confcommercio Veneto](#); [Unioncamere Veneto PDF](#)):

Business demographics (end 2024): - Market tertiary sector: 126,513 HQs (-1.9% YoY, -2,391 units), 51,227 local units (+1.1%, +557 units) - Represents 30% of regional business HQs and 45% of regional local units

Declining subsectors: - Food/beverage wholesale: -2.3% HQs, -0.4% local units - General goods wholesale: -3.2% HQs, -1.7% local units - Retail food specialists: -3.7% HQs (5,688 total), -1.2% local units - Clothing retail: -4.7% HQs (3,747 total), -2.0% local units - Footwear retail: -5.3% HQs, -2.4% local units - Street vendors: -6.5% HQs - Logistics: -6.1% HQs

Growing subsectors: - Accommodation: +5.2% HQs, +8.5% local units - Real estate: +5.2% HQs - Vehicle trade: +2.6% HQs (3,610 total), +5.2% local units - Software/IT consulting: +1.3% HQs

Key trend: “Concentration and multi-location expansion” — fewer enterprises operating multiple branches across provinces, creating “commercial desertification” (desertificazione commerciale) in urban centers.

1.2.2 2.2 Confcommercio — Assintel Report 2025

The Assintel Report 2025 (produced by Confcommercio’s digital association) provides ICT market data ([Confcommercio/Assintel](#); [Assintel](#)):

- Italian ICT market: EUR 44.3 billion in 2025, +4.5% growth

- Large companies (500+ employees): EUR 23.7B in ICT spend (53.5% of total), +5.6%
- Micro enterprises: +1.7% ICT growth
- Small enterprises: +3.3% ICT growth
- Only **3.6% of Italian companies** remain entirely undigitalized (down from ~130,000 in 2023 to ~50,000 in 2025)
- AI penetration surged from 7% to 29% in one year
- 3 out of 10 enterprises plan to increase ICT budget in 2026

1.2.3 2.3 Confartigianato — Small Enterprise Digitalization Study (Feb 2025)

(Confartigianato):

- **22.5%** of small Italian enterprises (10–49 employees) have high digital intensity (7+ of 12 technologies) — below EU average of 28.3%
- **67.8%** at basic digitalization level (4+ of 12 technologies)
- Distribution: 32.2% very low, 45.3% low, 20.2% high, 2.3% very high (10+ technologies)
- **66.8%** invested in digital in 2024 (down from 70.8% in 2021)
- Peer comparison: Germany 34.8%, Spain 27.6%, Italy 22.5%, France 18.2%

1.2.4 2.4 Osservatorio Innovazione Digitale nelle PMI (Politecnico di Milano, 2025)

(Osservatori.net):

- **54%** of Italian SMEs invest “decisively” in digital technologies
- Only **19%** adopt advanced technologies in a structured manner
- **83%** experience difficulties adopting digital tools
- **59%** report shortage of specialized personnel
- **47%** face connectivity access challenges (41% lack FTTH)
- **44%** cite cultural deficiencies as primary obstacle
- **38%** don’t recognize the need to increase internal digital skills
- **47%** funded transformation solely through internal resources
- **40%** cite hardware/software costs as a barrier
- **61%** initiated digitalization with external support
- Only **25.2%** of SMEs conduct online sales or accept bookings online (Webidoo data)

1.2.5 2.5 Confcommercio — EDI 5.0 (Digital Innovation Hub)

(Confcommercio):

- Confcommercio's EDI provides nationwide "Innovation Desks" (SPIN) for SMEs
 - Micro and small enterprises receive **100% subsidized assessments** covering: online visibility, cyber risk, financing capacity, sustainability
 - Free training webinars and digital solutions marketplace
 - 27% of PNRR resources target digital transition
 - Available incentives: Industry 4.0 tax credits, digitalization vouchers, New Sabatini program, Transition 5.0 credits, New Skills Fund for employee training
-

1.3 3. AI/Automation Case Studies

1.3.1 3.1 Italian / European SME-Relevant Case Studies

E-commerce retailer (outdoor gear, US-based but applicable) (DoneForYou.com): - Implemented AI-powered product recommendation engine on Shopify - Results: +15% average cart size within 6 weeks, +12% customer retention, ROI achieved within 45 days

Mid-sized online retailer — churn prediction (ActivDev): - Implemented RFM analysis and churn prediction connected to Shopify using AI - Automated customer segmentation, at-risk customer detection, personalized reactivation emails - Results: -15% customer churn within 6 months, +10% customer lifetime value

Independent consultant — AI sales assistant (ActivDev): - AI sales assistant using n8n and OpenAI for visitor engagement, prospect qualification, meeting scheduling - Results: +40% qualified meetings via website within 3 months, zero manual scheduling tasks

Sportswear retailer (BoldMetrics): - AI-driven personalization for fit and product recommendations - Results: +297% conversion increase, +27% average order value, -28% returns

Walmart pilot (large-scale but illustrative) (XcubeLabs): - Agentic AI with computer vision and shelf sensors for inventory management - Results: -30% out-of-stock events within 6 months

Kiko Milano (Italian cosmetics brand) (Covisian): - Chatbot for customer product selection guidance and personalized suggestions based on preferences and purchase history - Results: Not quantified publicly but used as benchmark for Italian retail AI adoption

1.3.2 3.2 General Measurable Benchmarks for AI in Commerce

AI in retail (2025 industry data) (Acropolium; Shopify): - 87% of retailers report AI had positive revenue impact - 94% have seen AI reduce operating costs - Stores using AI-driven personalization: +25% average order values, -19% return rates - Timeline to ROI: Personalization 1–6

months, supply-chain AI 6–12 months, conversational AI 3–9 months - GenAI early adopters report \$3.70 return per dollar invested; top performers \$10.30

AI chatbots for Italian SMEs (MIND Creative; Astrorei; NextGen PMI): - Over 40% of Italian SMEs plan to adopt a chatbot/virtual assistant by 2025 - Chatbots manage up to 80% of repetitive requests - Customer support cost reduction: 30–40% - 90% of companies report faster complaint resolution after AI chatbot deployment - SaaS chatbot costs: EUR 20–100/month for basic; EUR 3,000+ for custom CRM/ERP integration

1.3.3 3.3 Gaps in Case Study Evidence

- **Very few published Italian SME-specific case studies with named companies and quantified results** in the commerce sector. Most evidence comes from US/UK retailers or is anonymized.
- **No Veneto-specific commerce AI case studies found** in public sources.
- **Wholesale (B2B) AI case studies are almost entirely absent** — the vast majority of evidence relates to B2C retail or e-commerce.

1.4 4. Existing SaaS & AI Tools

1.4.1 4.1 Italian ERP / Gestionale Solutions for Commerce

Tool	Provider	Target	Key Features	Pricing
Mexal	Passepartout	25,000+ SMEs across Italy	Inventory, invoicing, accounting, multi-sector (food, wine, pharma, wholesale distribution). Highly customizable.	Not publicly listed; per-license model

Tool	Provider	Target	Key Features	Pricing
TeamSystem Enterprise Cloud	TeamSystem	SMEs in commerce and services	ERP with e-invoicing, warehouse/logistics, CRM, HR. 2025: AI virtual assistant module with machine learning.	Not publicly listed; modular subscription
Gestionale 2	Zucchetti	SMEs	Administration, sales, logistics, production, management control. Modular and scalable.	Not publicly listed
MagoCloud	Zucchetti (via Ithesia)	Wholesale distribution SMEs	Order management, pricing, shipping, sourcing, invoicing. 4 editions (Standard to Enterprise).	Not publicly listed; tiered
eSOLVER	Sistemi (Cuneo)	Commerce wholesale/retail, manufacturing, services	Complete ERP for production, services, wholesale and retail commerce.	Not publicly listed
Spring	Various partners	10,000+ Italian SMEs	Modular, scalable ERP for small and medium businesses.	Not publicly listed
Panthera	Panthera	Italian SMEs	Made-in-Italy ERP, customizable for specific business processes.	Not publicly listed

Tool	Provider	Target	Key Features	Pricing
Nabirio Gaveira	Nabirio	Micro/small businesses	Warehouse management, invoicing, bookkeeping. Simpler/lighter tool.	Freemium + paid tiers
Reacto ERP	Reacto	PMI	Cloud-based ERP for Italian SMEs.	Not publicly listed

Sources: [Passepartout](#), [TeamSystem](#), [Zucchetti](#), [INTIT](#), [AGM Blog](#)

1.4.2 4.2 AI-Powered Inventory & Demand Forecasting Tools

Tool	Focus	Target	Starting Price
Zoho Inventory	AI-powered inventory with ZIA AI for demand forecasting, stock insights, workflow automation	SMEs, e-commerce, wholesalers	Freemium; paid from ~\$79/mo
EazyStock	Inventory optimization for wholesalers, distributors, retailers with complex SKU catalogs. ERP integration.	Wholesalers, distributors	Custom pricing
Prediko	AI demand forecasting, Shopify integration	E-commerce SMEs	\$119/mo
Fabrikator	SKU-level forecasting	E-commerce	\$99/mo
Leafio	AI inventory and demand forecasting for multi-location retailers, automated replenishment	Multi-location retail	Custom pricing

Source: [Prediko](#), [SCM Galaxy](#)

Market size: AI in inventory management grew from \$7.38B (2024) to \$9.6B (2025), projected \$27.23B by 2029 at 27.2% CAGR ([The Business Research Company](#)).

Cost reduction benchmarks: AI can cut warehousing expenses by 5–10% and administrative costs by 25–40% ([SmartDev](#)).

1.4.3 4.3 AI Chatbot / Customer Service Tools

Tool	Type	Starting Price	Notes
Tidio	SaaS chatbot for e-commerce	~EUR 20–30/mo	Popular with Shopify/WooCommerce SMEs
Manychat	SaaS chatbot (Facebook/Instagram/WhatsApp)	Free tier; paid from \$15/mo	Social commerce focus
Custom chatbot (CRM/ERP integrated)	Bespoke development	EUR 3,000+	Full integration with gestionale

Source: [NextGen PMI](#)

1.4.4 4.4 E-commerce Market Context

- Italian B2C e-commerce: EUR 62B+ in 2025 (+6% YoY); product e-commerce: EUR 40.1B (+6%) ([Osservatorio eCommerce B2c, Politecnico di Milano](#))
- Number of Italian companies with an e-commerce site: 91,000 (+3.4% vs 2024), with capital companies growing +8.5% ([Osservatori.net](#))
- Only **20.4% of SMEs** (10+ employees) made online sales in 2024 (up from 19.1% in 2023) — Italy ranks below EU average ([ISTAT](#))
- Food & Grocery and Beauty & Pharma growing above average (~7%); Clothing and Electronics at ~5–6%

1.5 5. Veneto-Specific Context

1.5.1 5.1 Distretti del Commercio (Commercial Districts)

Veneto operates a distinct system of **Distretti del Commercio** — formalized commercial districts supported by regional funding ([Regione Veneto](#); [Regione Veneto press release](#)):

- **185 commercial districts** recognized (123 urban + 62 territorial)
- **323 municipalities** involved (~58% of all Veneto municipalities)
- **EUR 36.7 million** in regional funding over 5 years (2019–2024)
- **EUR 94.97 million** total generated investment (including private co-investment)
- **168 projects** funded across three rounds (2019, 2021, 2022)
- **1,371 enterprises** participated across 116 districts
- **70 additional projects** funded with FESR (European structural funds) in 2023–2024
- **New 2026 call:** EUR 10 million in FESR funds planned for early 2026

2025 new districts by province: - Padova (4): Cornaro e Corti benedettine, Piombino Dese, “Il territorio al centro”, Tribano - Treviso (3): Breda di Piave–Carbonera, Caerano di San Marco, Trevignano - Venezia (2): Ceggia, Antiche vie d’acqua (Meolo–Fossalta di Piave) - Vicenza (1): Cassola - Verona (2): Val Mezzane, Alta Val d’Illasi

Districts integrate commercial functions with “other economic, tourist, and cultural vocations” of their territories.

1.5.2 5.2 Veneto Export Profile

Overall ([SACE](#); [SACE Doing Export Report 2024](#)): - Veneto exports: **EUR 80.2 billion** in 2024 (12.9% of national total, 3rd exporting region) - **413,256 active enterprises**, of which **26,214 are SMEs** and **22,679 are foreign trade operators** - Export weight in regional economy: **41.4%** - Extra-EU trade: 42% of total exports - Top destinations: Germany (~14–15%), France (~10–11%), USA (~9–10%)

Provincial breakdown of exports: - Vicenza: EUR 23B (28% of regional total) — #1 - Treviso: 20% - Verona: 19% - Padova: 16%

Commerce’s role in the export chain: Wholesale businesses (commercio all’ingrosso) serve as critical intermediaries in Veneto’s export-oriented economy, particularly in: - **Agroalimentare/wine:** Veneto agrifood exports more than doubled from EUR 4.9B (2008) to EUR 10B+ (2021), +104%. Verona and Treviso hold ~70% of regional wine/beverage exports ([ExportPlanning](#)) - **Prosecco:** Over 600 million bottles/year; US exports +20% in 2024; wholesale distribution networks span international markets ([Cavittoria](#)) - Wholesale distributors in agroalimentare manage multilingual documentation, export compliance, customs paperwork, multi-currency invoicing

1.5.3 5.3 Business Demographic Trends

Declining commerce, growing services ([Confcommercio Veneto](#)): - Veneto active enterprises end-2024: ~418,000 units (-0.9% YoY) - **Wholesale enterprises**: 4,982 (food/bev wholesale declining -2.3%, general goods -3.2%) - **Retail food/beverage**: 5,688 active businesses (-3.7%) - **Clothing retail**: 3,747 HQs (-4.7%) - **Vehicle commerce**: 3,610 HQs (+2.6% — one of few growing subsectors) - Trend: fewer businesses but more multi-location enterprises; “commercial desertification” of urban centers - Software/IT consulting growing +1.3% — only traditional services subsector with consistent growth

1.5.4 5.4 Seasonal Dynamics

- **Wine/Prosecco**: Harvest season (September–October) creates peak in wholesale activity; holiday season (November–December) is peak for retail and distribution
- **Tourism-linked retail**: Venice, Verona, Lake Garda, Dolomites — strong seasonality with peaks in summer and around major events (Carnival, Vinitaly in April, etc.)
- **Fashion retail**: Saldi (regulated sales seasons, typically January and July) drive significant demand cycles
- **Food wholesale**: Christmas/Easter peaks; summer peaks for tourism-linked food service supply

1.5.5 5.5 Wholesale-Specific Veneto Context

Major wholesale distribution players in Veneto operate across: - **Wine and beverages**: Companies like Fusari (60+ years, covering Brescia/Cremona/Mantova/Verona/Trento) and Enoteca Le Cantine Dei Dogi (Venice/Treviso/Padova provinces) ([ItalianWineLover](#)) - **General food wholesale**: Supplying HoReCa, GDO, and independent retailers across the region - **Industrial materials**: Supporting Veneto’s manufacturing districts (mechanical, furniture, eyewear)

1.5.6 5.6 Confcommercio Padova — Digital Dashboard

In February 2026, Confcommercio Padova and InfoCamere launched an **interactive real-time dashboard** for the tertiary sector — the first of its kind in Italy — monitoring business demographics, economic indicators, and commercial trends at provincial level ([PadovaOggi](#)). This suggests growing institutional appetite for data-driven commerce monitoring.

1.6 6. Raw Notes & Additional Findings

1.6.1 6.1 AI Adoption Rates — Italy vs. EU

- Italy 2024: 8.2% of enterprises (10+ employees) use AI; up from 5.0% in 2023 (ISTAT)
- Italy 2025: 16.4% of enterprises (10+ employees) use at least one AI technology — significant jump (Bitmat)
- EU 2025: ~20% of enterprises (10+ employees) use AI-based technologies (+6.5 percentage points YoY)
- Small enterprises (up to 49 employees): Only 6.9% used AI in 2024; compare Sweden, Belgium, Denmark >20%
- Most common AI application areas: Marketing & sales (33.1%), administrative processes (25.7%), R&D
- If Italy reached 60% AI adoption target: estimated EUR 1,299 billion in additional potential revenues (Agenda Digitale)

1.6.2 6.2 E-invoicing as a Digitalization Gateway

Italy's mandatory e-invoicing (fatturazione elettronica) via SDI since 2019 has created a baseline of digital compliance across all businesses. However: - XML FatturaPA format has 100+ data fields (Storecove) - Many SMEs adopted the minimum viable approach (outsourcing to accountant) without integrating into broader workflows - This represents both a barrier (compliance fatigue) and an opportunity (data already digitized but not leveraged)

1.6.3 6.3 Investment Incentives Available

- **Piano Transizione 4.0/5.0:** Tax credits for Industry 4.0 investments (machinery, software, training)
- **Nuova Sabatini:** Subsidized financing for capital goods and digital technologies
- **Voucher per la digitalizzazione:** Non-repayable grants for IT solutions
- **Fondo Nuove Competenze:** Reimburses training costs for employee digital skill development
- **PNRR digital transition funds:** 27% of total PNRR resources earmarked for digital
- **FESR Veneto:** EUR 10 million for commercial districts planned 2026
- Veneto is a top-3 user nationally of Piano Transizione 4.0 incentives

1.6.4 6.4 Gaps and Limitations in This Research

- **Wholesale (B2B) data is significantly harder to find** than retail (B2C) data. Most digital transformation research focuses on consumer-facing businesses.

- **No published data found on AI adoption rates specifically for the commerce sector** (vs. aggregate across all sectors).
 - **Veneto-specific digital adoption data for commerce is absent** — regional breakdowns tend to be at the sector-aggregate level, not sector+region.
 - **Pricing for Italian gestionale software is almost never published** — vendors use “request a quote” models.
 - **Italian-language AI case studies with named companies and quantified ROI in commerce are extremely scarce.**
 - **Wholesale daily operations** are poorly documented in public sources compared to retail; most operational insight comes from Confcommercio’s wholesale day report and job description sites.
-
